PROFESSIONAL PROFILE

AI Engineer based in Córdoba, Argentina. I build AI systems that do real work inside a company — assistants people actually use, integrated into the tools and workflows they already have. At Cintelink I built an AI assistant embedded in the company platform, with a strong focus on identity-aware authorization: it operates within the user's existing access context, preserving the permission boundaries the platform already enforces. I also built the infrastructure that makes it useful — ingestion and retrieval pipelines, and responses grounded in internal knowledge rather than model memory. Before AI I spent around two years working with Unreal Engine and C++ building replicated multiplayer systems, which is why I approach LLM applications as engineering systems: state, latency, observability and failure modes are familiar problems in a new domain. I evaluate new techniques empirically before adopting them.

TECHNICAL SKILLS

AI & LLM Systems: n8n, OpenAI API, RAG, MCP (Model Context Protocol), Tool / Function Calling, AI Agents, Contextual Memory, Prompt Engineering.
Integrations & Data: REST APIs, Identity-aware Authorization, Data Ingestion & Retrieval Pipelines, Jira, Slack Bolt SDK, Google Drive API, Webhooks, Python.
Engineering Foundations: C++, Unreal Engine 4/5, Multiplayer Replication, Gameplay Ability System (GAS), Behavior Trees, Unity / C#, JavaScript.
Tools & Process: Git, GitHub, Bitbucket, Sourcetree, Jira, Code Review.
Languages: Spanish (Native), English (Intermediate).

WORK EXPERIENCE

IT Analyst / AI Developer

Sep 2024 — Present

Cintelink

Córdoba, Arg

- Built an **AI assistant embedded in the company platform**, with a strong focus on **identity-aware authorization**: the assistant operates within each user's existing access context, preserving the permission boundaries the platform already enforces.
- Built the **ingestion and retrieval pipelines** behind it, grounding responses in internal knowledge rather than model memory, with contextual memory across a conversation.
- Developed **workflow automation** across operational and collaboration tools.
- Evaluated graph-based retrieval** as a potential improvement to the existing retrieval architecture; the measured gains did not justify the added operational complexity, and I recommended against adoption.

Unreal Engine Developer

May 2022 — May 2024

Ravegan

Remote

- Built **replicated multiplayer systems** in C++ and Blueprints: distributed state, server authority and consistency under latency.
- Designed extensible character ability architecture using the **Gameplay Ability System (GAS)**, and NPC decision systems with Behavior Trees.
- Conducted internal code reviews and system refactors across Unreal Engine 4 and 5 projects.

Videogame Developer

Nov 2021 — Mar 2022

Livemedia

Remote

- Developed browser games for **Cartoon Network** and **Discovery Kids** using **Phaser (JS)**, translating design requirements into maintainable code.

PROJECTS

Platform AI Assistant

2024 — Present

LLM Applications · RAG · Identity-aware Authorization · Retrieval Pipelines

- Support assistant embedded in the Cintelink platform, now in its second iteration.
- Built around identity-aware authorization: operates within each user's existing access context, with responses grounded in internal knowledge rather than model memory.

Psyker (Link)

2022 — 2023

Unreal Engine 4 · C++ · Multiplayer

- 3D multiplayer fighting game. Implemented gameplay systems, UI and networking in C++ and Blueprints.

Roguelike Prototype

2023 — 2024

Unreal Engine 5 · GAS · C++ (Unreleased)

- 3D roguelike prototype. Abilities and weapons architected with the Gameplay Ability System, plus AI behaviors in C++ and Blueprints.

EDUCATION

Virtual Simulations and Videogames

2017 — 2021

IES College (Córdoba, Argentina)
