PROFESSIONAL PROFILE

AI Engineer based in Córdoba, Argentina. I build LLM-powered assistants and automations connected to the systems a company actually runs on — retrieval grounded in internal documentation, and tool calling that lets a model take action instead of only answering. At Cintelink I design and operate these systems end to end, orchestrated in n8n and integrated with Slack, Jira and Google Drive. Before AI I spent around two years in Unreal Engine and C++ building replicated multiplayer systems, which is why I treat LLM work as engineering: state, latency and failure modes are familiar problems in a new domain. I measure before adopting.

TECHNICAL SKILLS

AI & LLM Systems: n8n, OpenAI API, RAG, MCP (Model Context Protocol), Tool / Function Calling, Contextual Memory, Prompt Engineering.

Integrations & Backend: REST APIs, Slack Bolt SDK, Jira, Google Drive API, Webhooks, Python.

Engineering Foundations: C++, Unreal Engine 4/5, Multiplayer Replication, Gameplay Ability System (GAS), Behavior Trees, Unity / C#, JavaScript.

Tools & Process: Git, GitHub, Bitbucket, Sourcetree, Jira, Code Review.

Languages: Spanish (Native), English (Intermediate).

WORK EXPERIENCE

IT Analyst / AI Developer

Sep 2024 — Present

Cintelink

Córdoba, Arg

- Design and operate **AI-driven automations in n8n**, integrating LLMs with Slack, Jira, Google Drive and internal services.
- Built an **internal AI assistant on Slack**, now in its second iteration, running on OpenAI models.
- Implemented **RAG** over internal documentation with contextual memory, grounding answers in company sources rather than model memory.
- Developed **REST integrations and tool / function calling** so the assistant can execute actions, not only respond.
- Worked with **MCP (Model Context Protocol)** to expose tools and context to models through a standard interface.
- **Evaluated GraphRAG** against the retrieval pipeline already in production and recommended against adoption, as the accuracy gains did not justify the added complexity and cost.

Unreal Engine Developer

May 2022 — May 2024

Ravegan

Remote

- Built **replicated multiplayer systems** in C++ and Blueprints: distributed state, server authority and consistency under latency.
- Designed extensible character ability architecture using the **Gameplay Ability System (GAS)**, and NPC decision systems with Behavior Trees.
- Conducted internal code reviews and system refactors across Unreal Engine 4 and 5 projects.

Videogame Developer

Nov 2021 — Mar 2022

Livemedia

Remote

- Developed browser games for **Cartoon Network** and **Discovery Kids** using **Phaser (JS)**, translating design requirements into maintainable code.

PROJECTS

Internal AI Assistant (Slack)

2024 — Present

n8n · OpenAI · RAG · MCP · Slack SDK · Google Drive

- Technical-support assistant used internally at Cintelink, now in its second iteration.
- Answers grounded in company documentation through RAG; tool calling into Jira, Drive and internal services.

Psyker (Link)

2022 — 2023

Unreal Engine 4 · C++ · Multiplayer

- 3D multiplayer fighting game. Implemented gameplay systems, UI and networking in C++ and Blueprints.

Roguelike Prototype

2023 — 2024

Unreal Engine 5 · GAS · C++ (Unreleased)

- 3D roguelike prototype. Abilities and weapons architected with the Gameplay Ability System, plus AI behaviors in C++ and Blueprints.

EDUCATION

Virtual Simulations and Videogames

IES College (Córdoba, Argentina)

2017 — 2021
